Multi-Spot™
Nd:YAG
With Multiple Sequential Pulsing Technology

Precise and comfortable treatment with 4 cooled and easily changed lightguides

Long-Pulse Nd:YAG with multiple sequential pulsing
- Protects the epidermis, allowing the safe use of higher fluences
- Improves the efficacy in clearance of vascular lesions*

How it works:
Light energy is delivered during the pulses, and the tissue cools during the delays. More energy is safely delivered to the target.

What it does:
Multiple-Sequential Pulsing allows for cooling between pulses to safely remove hair on all skin types including darker skin and reduces the chance of skin damage in vascular lesion treatments.

For treatment of leg veins and vascular lesions
Including telangiectasias, hemangiomas and more
