UltraPulse® DUO
For those who demand excellence
When it comes to precision and high-end performance, UltraPulse CO₂ laser is the ultimate solution.

Now, Lumenis brings to you the UltraPulse DUO, a CO₂ laser system that caters to physicians and surgical centers who demand excellence from themselves and their laser system. The UltraPulse DUO was meticulously developed with physicians and is based on decades of accumulated experience and the Lumenis innovative approach, to meet a growing number of clinical challenges today.

The UltraPulse DUO system is designed to deliver CO₂ laser energy via an articulated arm or through a Lumenis CO₂ laser fiber. With UltraPulse DUO you don’t have to compromise – you can have the precision you desire as well as access to hard-to-reach anatomies.

The Lumenis UltraPulse DUO is the CO₂ laser system that allows surgeons to achieve the Master’s Touch.

How can UltraPulse DUO benefit your practice?

Seamlessly alternate between the CO₂ energy deliveries to ensure individualized patient care.

Address unexpected challenges
With the vital combination of precision and flexibility, you can be prepared to address unexpected challenges during a procedure. The comprehensive set of tools enables a complete operation without the need for additional procedures and hospitalization.

Smart tissue management
High preservation of adjacent delicate tissue results in fewer adverse events, adhesions and quicker recovery time.

Experience clear and char-free margins
Achieve controlled pathological sample outcomes as a result of adequate margin visibility. Clear and clean margins are a true value in pathology and a top goal in today’s operating room.

Progress to the outpatient environment
Expand out of the traditional OR setting and periodically treat on recurring conditions under local anesthesia.
Combining unparalleled precision with flexibility.

UltraPulse DUO combines the unparalleled precision of the Digital AcuBlade™ Scanning Micromanipulator with the flexibility of the FiberLase CO₂ laser fiber.

Exclusively shaped for the articulated CO₂ laser arm, the Digital AcuBlade Micromanipulator with SurgiTouch scanner delivers laser energy inside a user defined geometric shape. The rapid motion of the scanner, faster than a human hand can produce, takes the energy delivery and entire operation to its highest precision, resulting in:

**Maximum control** over incision length, ablation area and treatment depth.

**Replicated tissue interaction**, customized to patient anatomy and the shape of the undesired tissue.

**The rapid scanning movement** may reduce the procedure time compared with conventional CO₂ laser microsurgery.

“I’ve used lasers for 30 years, primarily CO₂ lasers. I find the Digital AcuBlade a game changer by providing precise control and automatic treatment of large areas on the vocal cords in shapes of lines and circles that conform to the anatomy in a much faster and precise technique than the one that can be achieved by a human hand controlling the micromanipulator.”

Mark Courey, M.D., Professor, University of California, San Francisco
Otolaryngology – Head and Neck Surgery Director, Division of Laryngology

The CO₂ laser fiber is highly durable and flexible. Accompanied by a collection of dedicated operational tools, the CO₂ fiber allows easy access to difficult-to-reach anatomy and provides a variety of delicate treatment options.

**Adjustable aiming beam** that enables precise positioning to ensure the desired tissue is targeted.

**Renewable tip** that can be cleaved and revived during use, facilitating smooth operation and cost effectiveness.

**60% greater energy transmission** that enables sufficient delivery of CO₂ laser energy (in comparison with other CO₂ fibers based on Lumenis internal bench test).

**30% longer fiber** that provides extended steering capabilities and greater convenience in the operating sphere (in comparison with other CO₂ fibers).

“While scanning free beam technology is the gold standard for CO₂ laser surgery, ENT surgeons are often faced with patients who have access challenges to line-of-sight techniques, including the distal airway, that cannot be addressed with one single laser modality.” “With the scanning free beam and fiber integration in one CO₂ laser solution, only available in the UltraPulse DUO, I am able to deliver unparalleled treatments throughout the larynx and aero digestive tract with full flexibility and precision.”

Paul Castellanos, M.D., Associate Professor of Surgery at the University of Alabama at Birmingham.
Optimizing your surgical tool to the fullest.

UltraPulse DUO is an advanced computer-controlled, user-friendly CO₂ pulsed laser platform. It is based on a patented CO₂ laser tube providing up to 60 watts of power. It can generate a continuous series of short-period, high-peak-power pulses. During the high peak power, the laser energy is delivered very rapidly, resulting in vaporization of the targeted tissue without the creation of collateral injury.

The Lasing modes (UltraPulse and Continuous Wave) can be alternated according to the desired tissue interaction while the three exposure modes (Repeat, Single & Constant) will allow comprehensive timed-controlled energy delivery.

The advanced user interface is not only user friendly and easy to adopt but provides the ability to customize and save any set of parameters during a procedure.

UltraPulse DUO is intended for use in surgical applications requiring the ablation, excision, incision and coagulation of soft tissue. A wide range of indications for use will ensure the laser system is fully utilized within the healthcare facility. A partial list of indications includes:

- **Otolaryngology (ENT)**
  - Benign and malignant lesions: Oral, Nasal, Pharynx, Larynx, Trachea and Ear.
  - Papillomatosis, Tonsillectomy, Bronchoscopy, Subglottic and Tracheal Stenosis, Stapedotomy, Cholesteatoma, Myringotomy

- **Gynecology**
  - (including laparoscopy and robotic assisted surgery)
  - Endometriosis, Excision/lysis of adhesions, Uterine myomas and fibroids, Ovarian fibromas and follicle cysts. Uterosacral ligament ablation, Hysterectomy, Conization of the cervix

- **Neurology**
  - (Neurological indications for treatment of the Central Nervous System are only for USA)
  - Posterior fossa tumors, Peripheral neurectomy, Benign and malignant tumors and cysts, acoustic neuromas, lipomas. Arteriovenous malformation, Pituitary gland tumors

The advanced user interface is not only user friendly and easy to adopt but provides the ability to customize and save any set of parameters during a procedure.

Risk Information

CO₂ lasers (10.6 µm wavelength) are intended solely for use by trained physicians. Incorrect treatment settings or misuse of the technology can present risk of serious injury to patient and operating personnel. The use of Lumenis CO₂ laser is contraindicated where a clinical procedure is limited by anesthesia requirements, site access, or other general operative considerations. Risks may include excessive thermal injury and infection. Read and understand the CO₂ systems and accessories operator manuals for a complete list of intended use, contraindications and risks.
Achieve the master’s touch.

**Laser Type**
Sealed CO₂ Laser, RF excited

**Wavelength**
10.6 micron, (infrared, TEM00)

**Delivery Modes**
Free Beam (articulated arm) and Fiber

**Power Modes**
Continuous Wave (CW), UltraPulse (UP)

**Pulse Energy and Power Range**

<table>

**Pulse Duration**
Up to 2 ms

**Timed-Exposure Modes**
Single, Repeat and Constant

**Electrical**
100-120 VAC input power, 20A, 50/60Hz
200-240 VAC input power, 16A, 50/60 Hz

**Aiming Beam**
Red diode laser (635 nm)
6 settings (up to 5mW maximum)
Ejectable for Continuous or blinking modes

**Air flow**
Electronically controlled with user controls
Internal (low flow) or external (high flow) with bacterial filter; electronically controlled

**Purge air exiting fiber**
Maximum Pressure
From internal pump: 8-10 psi
From external source set to 60 psi: 60 psi

**Dimensions**
Base footprint (W X D X H): 34 X 51 X 100 cm H* (13.6” X 20” X 40” H*)
System height to top of folded arm: 195 cm (77 in)

**Weight**
132 kg (291 lbs)
